GHS02 Flame	
Flam. Liq. 3 H226 Flammable liqu	uid and vapour.
GHS08 Health hazard	
	ausing cancer. lamaging fertility or the unborn child. ge to the hearing organs through prolonged or repeated exposure.
GHS07	
Skin Irrit. 2 H315 Causes skin irr Eye Irrit. 2A H319 Causes seriou	
Classification according to Directiv Harmful	e 67/548/EEC or Directive 1999/45/EC
Harmful by inhalation. Harmful: c Possible risk of harm to the unborr	langer of serious damage to health by prolonged exposure through inhalation child.
Irritant	
Irritating to eyes and skin. Flammable. • Information concerning particular	
hazards for human and environment:	Vapours of the product are heavier than air and may accumulate on the groun in mines, drains or cellars with higher concentration. Contact with skin and inhalation of aerosols/ vapours of the preparation shou be avoided.
 Classification system: 	The product has to be labelled due to the calculation procedure of the "Gener Classification guideline for preparations of the EU" in the latest valid version. The classification was made according to the latest editions of internation substances lists, and expanded upon from company and literature data. (Contd. on page

CAS: 13463-67-7 EINECS: 236-675-5	titanium dioxide line carc. 2, H351	<1%
 Additional information: 	For the wording of the listed risk phrases refer to section 16.	

4 First-aid measures

Description of first aid measures Take affected persons out into the fresh air linfo

· General mormation:	Take anected persons out into the iresh air.
	Position and transport stably on side.
	Immediately remove any clothing soiled by the product.
	Symptoms of poisoning may even occur after several hours; therefore medical
	observation for at least 48 hours after the accident.
<u>After inhalation:</u>	Supply fresh air. If required, provide artificial respiration. Keep patient warm.
	Consult doctor if symptoms persist.
	In case of unconsciousness place patient stably in side position for
	transportation.
<u>After skin contact:</u>	If skin irritation continues, consult a doctor.
	Immediately wash with water and soap and rinse thoroughly.
<u>After eye contact:</u>	Rinse opened eye for several minutes under running water. If symptoms persist,
	consult a doctor.
<u>After swallowing:</u>	If symptoms persist consult doctor.
 Information for doctor: 	With reference to section 2 the formulation contains styrene in the indicated
	mass concentration range. Styrene fumes will preferably be incorporated by
	inhalation via respiratory tract, skin resorption is currently considered as an
	inferior way of incorporation. In case of inhalation styrene is absorbed in a 60-
	90% range. Distribution in organism occurs rapidly, the maximum blood
	concentration can be analyzed after one hour after incorporation. Styrene
	exposition affects skin, mucous membranes, and central nervous system (CNS).
	Acute damages / risks to health:
	In case of styrene poisoning mainly damages to and interactions with central
	nervous system (CNS) arise. In concentration ranges above 200 ml/m3
	symptoms such as fatigue, nausea, imbalance and prolonged response times
	are observed.
	Chronical health risks:
	Effects at central and peripheral nervous system and respiratory tract are
	evident in literature.
	Main health risks are:
	- prolonged response times
	- reduced cognitive performance, partial amnesia
	- retardation of nervous impulse transition speed
	- disturbances of pulmonary function
 Most important symptoms and 	
effects, both acute and delayed	Breathing difficulty
	Headache
	Dizziness
	Coughing
	Nausea

 <u>Danger</u> <u>Indication of any immediate</u> medical attention and special 	(Contd. of page 3) Danger of impaired breathing.
treatment needed	If swallowed, gastric irrigation with added, activated carbon.
5 Fire-fighting measures	
 Extinguishing media 	
Suitable extinguishing agents:	CO2, extinguishing powder or water spray. Fight larger fires with water spray or alcohol resistant foam.
 For safety reasons unsuitable 	
extinguishing agents:	Water with full jet
 Special hazards arising from the 	
substance or mixture	Formation of toxic gases is possible during heating or in case of fire. In case of fire, the following can be released: Carbon monoxide (CO) Nitrogen oxides (NOx)
	In certain fire conditions, traces of other toxic gases cannot be excluded.
Advice for firefighters	Mission of the state
<u>Protective equipment:</u>	Wear self-contained respiratory protective device. Do not inhale explosion gases or combustion gases. Wear fully protective suit. Mount respiratory protective device.
· Additional information	Dispose of fire debris and contaminated fire fighting water in accordance with official regulations. Collect contaminated fire fighting water separately. It must not enter the sewage system.

6 Accidental release measures

 Personal precautions, protective equipment and emergency 	<u>e</u>
procedures	Ensure adequate ventilation
	Keep away from ignition sources
	Use respiratory protective device against the effects of fumes/dust/aerosol.
	Wear protective equipment. Keep unprotected persons away.
 Environmental precautions: 	Do not allow product to reach sewage system or any water course.
	Inform respective authorities in case of seepage into water course or sewage
	system.
	Do not allow to enter sewers/ surface or ground water.
 Methods and material for 	
containment and cleaning up:	Dispose of the collected material according to regulations.
	Absorb with liquid-binding material (sand, diatomite, acid binders, universal
	binders, sawdust).
	Dispose contaminated material as waste according to item 13.
	Ensure adequate ventilation.
 Reference to other sections 	See Section 7 for information on safe handling.
	See Section 8 for information on personal protection equipment.
	See Section 13 for disposal information.
7 Handling and storage	

· Handling:

i lananing.	
 Precautions for safe handling 	Keep receptacles tightly sealed.
	Store in cool, dry place in tightly closed receptacles.
	Keep away from heat and direct sunlight.
	Ensure good interior ventilation, especially at floor level. (Fumes are heavier
	than air).

	Keep away from foodstuffs, beverages and feed.
	Immediately remove all soiled and contaminated clothing. Wash hands before breaks and at the end of work.
	Do not inhale gases / fumes / aerosols.
	Avoid contact with the eyes and skin.
 Breathing equipment: 	Short term filter device:
	Filter A/P2
	In case of brief exposure or low pollution use respiratory filter device. In case of intensive or longer exposure use respiratory protective device that is independent of circulating air.
 Protection of hands: 	After use of gloves apply skin-cleaning agents and skin cosmetics.
	Preventive skin protection by use of skin-protecting agents is recommended.
	The protection gloves to be used have to comply with the specifications of the directive 89/686/EC and the directive derived decree EN374, respectively, e.g.
	the above listed protection glove type. The mentioned permeation times' data
	were generated and verified with material samples of the recommended
	protection glove type in the scope of laboratory anylyses of the company KCL
	GmbH in compliance with EN374.
	This recommendation refers exclusively to the material safety data sheet
	referenced product delivered by Akemi and the indicated field of application. In
	case of product dilution or in case of mixture with different substances or chemicals, and in condition of EN374 deviation the producer of CE-approved
	protection gloves must be contacted for detailed information (e.g., KCL GmbH,
	Germany, 36124 Eichenzell, internet: http://www.kcl.de).
	Protective gloves
	The glove material has to be impermeable and resistant to the
	product/ the substance/ the preparation.
	Due to missing tests no recommendation to the glove material can be
	given for the product/ the preparation/ the chemical mixture. Selection of the glove material on consideration of the penetration
	times, rates of diffusion and the degradation
 Material of gloves 	Fluorocarbon rubber (Viton)
<u>v</u>	The selection of the suitable gloves does not only depend on the material, but
	also on further marks of quality and varies from manufacturer to manufacturer.
	As the product is a preparation of several substances, the resistance of the
	glove material can not be calculated in advance and has therefore to be checked
 Penetration time of glove material 	prior to the application. Value for the permeation: Level \leq 6, 480 min
	The exact break trough time has to be found out by the manufacturer of the
	protective gloves and has to be observed.
For the permanent contact gloves	
made of the following materials are	
suitable:	Fluorocarbon rubber (Viton) Vitoject (KCL, Art No. 890)
 As protection from splashes gloves 	
made of the following materials are	
suitable:	Fluorocarbon rubber (Viton)
	Vitoject (KCL, Art No. 890)
	Nitrile rubber, NBR
	Camatril (KCL, 730, 731, 732, 733) Butul rubber, BB
	Butyl rubber, BR Butoject (KCL, Art No. 897, 898)
 Not suitable are gloves made of 	
the following materials:	Natural rubber, NR
	Leather gloves
	Strong gloves
