

# Majestic XXX Shine Premium Polishing Powder

XXX Shine is a premium grade polishing powder for restoring a beautiful natural polish on marble, travertine, limestone, and terrazzo. Ideal for final polish of restoration projects or the periodic maintenance of polished stone when traffic wear or etching occurs.

**Use On:** Marble, travertine, limestone, terrazzo and other calcium based stones capable of taking a polish.

**Available sizes:** 10lb, 45lb

**Product features:**

- Produces a brilliant polish quickly and efficiently
- Works faster than other similar products
- Does not etch or leave swirls easily
- Works on many difficult to polish marbles
- Goes further than other similar products

## THOROUGHLY TESTED

**Directions:**

Protect all adjacent surfaces with Tape & Drape masking film. Dust mop or vacuum to remove loose soiling. Remove any existing coatings (wax or floor finish) with Majestic Deep Cleaner Stripper Degreaser, Majestic Intensive Cleaner, or Majestic Ultra Strip. Ensure floor is clean. Test in an inconspicuous area prior to general use to confirm results. Keep a small window squeegee handy for checking progress and results. Wet an area of approximately 9 sqft to 25 sqft with clean water. Apply 2 tablespoons of XXX Shine in a small line of about 12" in length. Place a natural hair pad on the line of powder as if the powder were a spoke of a wheel and so the powder will work in a sweeping motion. Using a slow speed (140 rpm – 175 rpm) floor machine, work the slurry in the selected area for several minutes and check results with squeegee. When satisfactory results are achieved, wet vac the area, flood rinse with clean water and wet vac again. Move to the next area to be polished. Complete large areas in a checkboard fashion, overlapping areas to blend.

**Note:** The amount of water, number of passes, and weight of machine are some of the variables that can be adjusted to get the best performance. Can be used to touch up traffic lanes or small areas. Use slow consistent passes with the floor machine. Product contains acid so do not leave unattended or allow to dry on surface.
